**Brief Description of Arguments to be Presented:**

Ker does not teach a second LDD having the second conductivity type (N-type). Ker teaches that the N+ diffusion 46 is N-type, but the P\_LDD on the left side of the gate 50 is P-type. Thus Ker doesn't anticipate claim 5. As claimed, the second ion diffusion region and the second LDD are the same conductivity type.

An interview was conducted on the above-identified application on \_\_\_\_\_.

**NOTE:** This form should be completed by applicant and submitted to the examiner in advance of the interview (see MPEP § 713.01).

This application will not be delayed from issue because of applicant's failure to submit a written record of this interview. Therefore, applicant is advised to file a statement of the substance of this interview (37 CFR 1.133(b)) as soon as possible.
